

Practice Problems  
Polar and Complex Numbers

Name \_\_\_\_\_

1. If  $z = \frac{\sqrt{3}}{2} + \frac{1}{2}i$ , express  $z$  in polar form.

Calculate  $z^2$  and  $z^3$  by using De Moivre's theorem.

$\text{Ans } 30^\circ$

$$z^2 = 1 \text{ cis } 60^\circ$$

$$z^3 = 1 \text{ cis } 90^\circ$$

2. Compute  $(1 - i\sqrt{3})^5$ . Express your answer in polar and rectangular form.

$$2 \text{ cis } 30^\circ$$

$$z^5 = r^5 \text{ cis } 300^\circ$$

$$= 32 \text{ cis } 150^\circ = 32 \text{ cis } 60^\circ = 32(\cos 60^\circ + i \sin 60^\circ) = 16 + 16\sqrt{3}i$$

3. Find all three cube roots of  $8i$ . Call them  $z_1$ ,  $z_2$ , and  $z_3$ .

Express your answers in rectangular form.

$$8i = 8 \text{ cis } 90^\circ$$

$$z_1 = \frac{2 \text{ cis } 30^\circ}{r^3} = \frac{2 \text{ cis } 30^\circ}{8} = \frac{2 \text{ cis } 30^\circ}{r^3}$$

$$z^3 = r^3 \text{ cis } \theta$$

$$8 \text{ cis } 90^\circ = r^3 \text{ cis } 30^\circ$$

$$z_2 = \frac{2 \text{ cis } 150^\circ}{r^3} = -\sqrt{3} + 1i$$

$$r^3 = 8 \quad 2 \text{ cis } \left(\frac{180}{3} + 0\right)$$

$$z_3 = \frac{2 \text{ cis } 270^\circ}{r^3} = -2i$$

$$r^3 = 8 \quad 2 \text{ cis } 30^\circ$$

$$2 \text{ cis } \left(\frac{90}{3} + \frac{300}{3}\right) = 2 \text{ cis } 150^\circ$$

$$2 \text{ cis } \left(\frac{90}{3} + \frac{270}{3}\right) = 2 \text{ cis } 270^\circ$$

$$\text{Find the sum: } z_1 + z_2 + z_3 = 0$$

$$\text{Find the product: } z_1 \cdot z_2 \cdot z_3 = 8i$$

$$(i\sqrt{3})(-i\sqrt{3})(-2) = -4 \cdot -2 = 8i$$

4. Find all three cube roots of  $-8$ . Call them  $z_1$ ,  $z_2$ , and  $z_3$ .

Express your answers in rectangular form.

$$-8 = 8 \text{ cis } 180^\circ$$

$$z_1 = \frac{2 \text{ cis } 60^\circ}{r^3} = 1 + \sqrt{3}i$$

$$z^3 = r^3 \text{ cis } 30^\circ$$

$$z_2 = \frac{2 \text{ cis } 180^\circ}{r^3} = -2$$

$$8 \text{ cis } 180^\circ = r^3 \text{ cis } 30^\circ$$

$$z_3 = \frac{2 \text{ cis } 300^\circ}{r^3} = 1 - \sqrt{3}i$$

$$r^3 = 8 \quad 30^\circ = \frac{180}{3}$$

$$2 \text{ cis } \left(\frac{180}{3} + \frac{300}{3}\right)$$

$$2 \text{ cis } 180^\circ$$

$$\theta = 60^\circ$$

$$2 \text{ cis } \left(\frac{180}{3} + \frac{270}{3}\right)$$

$$2 \text{ cis } 300^\circ$$

$$\text{Find the sum: } z_1 + z_2 + z_3 = 0$$

$$\text{Find the product: } z_1 \cdot z_2 \cdot z_3 = -8$$

$$(1 + \sqrt{3}i)(-2)(1 - \sqrt{3}i)$$

$$(1 - 2\sqrt{3})(-2)$$
