

Stacking Paper

What's the Question?

MAKE SOME PREDICTIONS

TOO LOW

BEST GUESS

TOO HIGH

Given Information & Workspace:

The comparison of
height to number of
packs of paper would
be considered a:

RATIO
or
RATE

Justify your reasoning:

Extending Your Knowledge

Represent the relationship between height and number of paper packs as:

How close were you?

Rate Given In Video:

$$\frac{\text{HEIGHT}}{\text{NUMBER OF PACKS}}$$

Unit Rate:

$$\frac{\text{HEIGHT}}{1 \text{ packs}}$$

HOW MANY TO REACH CEILING?

$$\frac{\text{HEIGHT}}{\text{NUMBER OF PACKS}}$$

Decimal:

$$\frac{\text{HEIGHT}}{100 \text{ packs}}$$

Percent

$$\frac{\text{HEIGHT}}{100 \text{ packs}}$$

Percent

$$\%$$

Independent	Dependent
0	
10	
20	
30	
40	
50	
60	

Label Dependent Variable

1. A stack of paper packages have a height of 375.25 cm. Complete the **proportion** and solve to determine **how many packages of paper** should be in that stack.

$$\frac{24.75 \text{ cm}}{5} = \frac{\text{HEIGHT}}{\text{NUMBER OF PACKS}}$$

5. A stack of 6 packs of paper of a different brand has a height of 48 cm.
- How tall would a stack of 21 packages be?
 - Create an **equation** to represent the relationship between **height** and **number of packs** of this brand.

Fuel Remaining

Task: The graph shows the volume of gasoline remaining in a car's tank.

Identify:

Independent Variable:

Dependent Variable:

1. Create a table of values.

Distance (km)	Volume (L)
0	65
100	
200	
300	
400	
500	
600	

3. Is this a **proportional relationship**?
How do you know?

4. Write the **rate of change** in the following forms and **write a sentence** explaining the meaning relative to this scenario.

Write as a:		What Does It Mean?
Fraction		
Fraction out of 100		
Percent		
Decimal
